

THIS ROOM  
HAS BEEN CLEANED  
AND SEALED FOR  
YOUR PROTECTION

We know that one of the most important considerations you will make when deciding on a senior living community is the overall cleanliness and safety of the community. Juniper is proud to share our "White Glove Green Clean Program". This program was developed through extensive research by our COVID-19 Environmental Safety Team, which includes team members experienced in various aspects of infection control in senior living. We were also able to build upon an already strong foundation of existing protocols. Juniper is committed to delivering an industry-defining standard of cleanliness and sanitation in our communities as we provide a safe place for seniors to call home.

## Our community is not just clean... it's Juniper Green Clean with PUROXCIDE.

Some of the main components of this  
new program are highlighted below

1. As directed by the Centers for Disease Control (CDC), Juniper uses EPA approved chemicals that kill 99.9% of all bacteria and viruses on all surfaces.
2. "High-Touch" area disinfection on a frequent, routine basis. These areas include, but are not limited to doors, door knobs, handrails, elevator buttons, entryway keypads, community telephones, light fixtures, light switches, etc.
3. Detailed resident apartment cleaning and disinfecting including but not limited to doors, door knobs, fixture switches, light switches, hard surfaces in bathroom / kitchen areas, T.V. remote, doors, handles and switches for all appliances, etc.
4. Routine disinfection for common areas and resident apartments as needed with handheld foggers and/or electrostatic sprayers that disperse a disinfecting solution (Puroxide) that meets the EPA criteria for use against COVID-19.
5. Hand sanitizer available at high traffic areas throughout the community.
6. All associates trained and required to wear approved Personal Protective Equipment (PPE) as recommended by the CDC.
7. All associates monitored / screened on a daily basis for symptoms including temperature and required attestations.
8. All visitors are screened on a daily basis for symptoms including temperature and required attestations.
9. Each community has a Juniper certified plan to construct a CDC approved Isolation / Cohort Unit in the event that multiple residents develop symptoms.
10. All new residents and returning residents are required to undergo COVID-19 testing prior to admission, as well as a post move-in test 48 hours after move-in.
11. All new associates are required to undergo COVID-19 testing prior to beginning work, as well as a follow-up test after 48 hours.
12. Common area, activity room and dining room furniture arranged to promote social distancing.
13. Social distancing guideline reminders posted throughout the community.
14. Masks available for resident and visitor use, if individuals do not have their own.

### PUROXCIDE

is a hospital level disinfectant

### PUROXCIDE

is a safe EPA Registered disinfectant cleaner

### PUROXCIDE

is approved for use against COVID-19

### PUROXCIDE

cleans and disinfects any water-safe surface

### PUROXCIDE

is hypoallergenic and residue free
